

TSG 31

IN-SERVICE MATHEMATICAL TEACHER EDUCATION AND MATHEMATICAL TEACHER PROFESSIONAL DEVELOPMENT AT SECONDARY LEVEL

The Organizing Team

Chair: Konrad Krainer, Alpen-Adria-Universität Klagenfurt, Austria

Cochair: Betina Duarte, Universidad Pedagógica Nacional, Argentina

Members:

Talli Nachlieli, Levinsky College, Israel

Craig Pournara, University of the Witwatersrand, South Africa

Youchu Huang, Shanghai Normal University, China

The focus of TSG 31 is the study of in-service and/or professional development initiatives aimed at improving secondary mathematics teaching on a large scale. Scaling up means to reach many classrooms ($n \geq 10$), and potentially whole schools, districts, cities, or even a whole state or nation. TSG 31 welcomes all descriptions of initiatives such as in-service courses, professional development programs, school development projects, and collaborative networks of practitioners and researchers. However, each initiative should be research-based and provide new insights into the challenge of improving mathematics teaching on a large scale. Possible research questions could include: What does it take to up-scale a professional-development program? What are the factors that need to be considered when adapting a certain program to new cultural settings? Which aspects of the intervention could be scaled up and which couldn't? How could the impact of large-scale approaches be evaluated? What types of diagnostics about students' mathematics learning can be applied and why? To what extent can a steady collaboration between research and practice be achieved on a systemic level? What are the key factors in sustaining such collaboration? What challenges arise during such collaborations? TSG 31 invites ICME participants to submit papers and posters, which then undergo a review process. The criteria for reviewing the papers and posters are the following;

Each submission should address as many of the following criteria as possible:

Goal of the initiative (in particular, related to “improving teaching”, “scaling up” and “sustainability” of the initiative)

Context and design (cultural, organizational, ...)

Key actors, their roles and collaboration

Research question(s) and theoretical framework

Methodology and data analysis, limitations

Results that answer the research question(s), and thus go beyond showing the initial success of the initiative

Challenges arising during the implementation and ways of dealing with these challenges (in particular, related to “improving teaching”, “scaling up” and “sustainability”)

Lessons learnt (related to practice and/or research) for further developing the initiative and/or for other initiatives (e.g., what does it take to adapt a successful initiative for improving mathematics teaching to a different cultural setting?)

Program

Regular TSG sessions:

Session 1 (90 minutes): 20-30 minutes introduction by the Organizing Team, one invited lecture by Paul Cobb (30 minutes, 12 pages), two long presentations (16 minutes, 8 pages), each presentation including discussion.

Session 2 (60 minutes): A mixture of long presentations (16 minutes, 8 pages), regular presentations (12 minutes, 8 pages) and short presentations (8 minutes, 4 pages), each including discussion. In case of many submissions, we will organize small parallel groups (eventually using also a second room).

Session 3 (90 minutes): A mixture of long presentations (16 minutes, 8 pages), regular presentations (12 minutes, 8 pages) and short presentations (8 minutes, 4 pages), each including discussion. In case of many submissions, we will organize small parallel groups (eventually using also a second room).

Session 4 (60 minutes): A mixture of long presentations (16 minutes, 8 pages), regular presentations (12 minutes, 8 pages) and short presentations (8 minutes, 4 pages), each including discussion. 20-30 minutes summary by the Organizing Team.

Poster Session:

All accepted posters.
